DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/14/2005 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 48 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. patent 5,530,909 to Simon et al in view of U.S. patent 6,018,659 to Ayyagari et al.

Simon teaches in figure 2 first and second components (1 and 2) for transmitting and receiving a message with destination addresses, but does not teach forming a closed circuit by having the "destination address receive the message based on a broadcast part of the message.

Ayyagari et al teaches forming a "airborne internetworked mesh constellation" by having airborne vehicles 106 communicate with each other, wherein a closed network is

Art Unit: 2668

one example of the network shown wherein all of the arrows in figure 1 would have the same direction.

It would have been obvious to one of ordinary skill in the art at the time of the invention to have formed a closed circuit in Simon et al in light of the teachings of Ayyagari et al in order to provide a continuous data loop such that the said data is available to the users upon demand.

4. Claim 49 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. patent 5,530,909 to Simon et al in view of U.S. patent 6,018,659 to Ayyagari et al as applied to claim 48 above and further in view of U.S. patent 6,507,739 to Gross et al.

Simon/Ayyagari et al teach the invention as described above but do not teach determining if the circuit can be maintained for a given time interval based on navigational information.

Gross et al teaches adjusting system parameters regarding navigation in order to maintain the connection. See col 7 – 8, particularly col 8 lines 13+. It would have been obvious to one of ordinary skill in the art at the time of the invention to have determined if the connection can be maintained for a sufficient length of time in Simon/Ayyagari et al in light of the teachings of Gross in order to avoid making the circuit connection when to do so will result in an inefficient use of network resources.

5. Claims 45 – 47 are allowed.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven Blount whose telephone number is 703-305-0319. The examiner can normally be reached on M-F 9:00 - 5:30.
